

User Stories

Project Name: BonPlan.ai

Document Status: Approved for Technical Design Document (TDD)

Product Vision: Tell us When. We Tell the How.

1.0 Authentication & Onboarding

- **Story 1.1:** As a new user, I want to create an account using my email and Google OAuth, so that my trip data is securely saved.
- **Story 1.2:** As a returning user, I want to log in, so that I can access my previously saved itineraries.

2.0 Initial Trip Generation (The "Blank Canvas" & "Bleisure" Setup)

- **Story 2.1:** As a traveler, I want to input my source, destination, budget, start date, and end date, so that the AI can initialize a blank trip canvas.
- **Story 2.2:** As a user, I want to set a "Pacing Preference" (e.g., Relaxed, Action-Packed), so that the AI knows how much downtime to generate between activities.
- **Story 2.3:** As a user, I want to type a conversational prompt (e.g., "Make this a chill food tour"), so that the AI tailors the baseline generation to my exact vibe.

3.0 Constraint Management (The "Type-A" Smart Anchors)

- **Story 3.1:** As a meticulous planner, I want to manually input my flight arrival and departure times, so that the system locks them as immutable "anchors."
- **Story 3.2:** As a planner, I want to input a specific reservation (e.g., "Dinner at 8 PM at Location X"), so that the AI builds the rest of my day around it without deleting it.
- **Story 3.3:** As a user, I want the system to automatically calculate transit times from the airport to my hotel, so that my first scheduled activity is actually feasible.

4.0 Interactive Canvas (The "Dynamic Explorer" Adjustments)

- **Story 4.1:** As a dynamic traveler, I want to drag the edge of an activity block to extend its duration from 1 hour to 2 hours, so that I can spend more time there.
- **Story 4.2 (The Ripple Effect):** As a user, when I extend an activity, I want the system to automatically push the subsequent activities forward, so I don't have to recalculate the math myself.
- **Story 4.3:** As a user, I want the system to warn me if my drag-and-drop adjustment collides with a locked Smart Anchor, so I avoid double-booking myself.
- **Story 4.4 (Specific Regeneration):** As a user, I want to select a single AI-generated museum visit and click "Swap," so that the AI replaces it with a new activity without altering the rest of my day.

5.0 Multiplayer Mode (The Group Trip)

- **Story 5.1:** As a trip organizer, I want to generate a shareable link, so that I can invite my friends to view the itinerary.
- **Story 5.2:** As a group member, I want to upvote or downvote specific AI-generated activities, so that the itinerary automatically updates based on the group's consensus.

6.0 Post-Generation & Live Concierge

- **Story 6.1:** As a user, I want to export my finalized itinerary as a clean PDF, so that I have offline access to my plans.
- **Story 6.2:** As an active traveler, I want the live concierge to send me a morning summary of today's schedule and weather, so I am prepared for the day.
- **Story 6.3:** As an active traveler, I want the system to proactively suggest an indoor activity swap if it detects rain in the local forecast.

7.0 Deep Personalization & Lifestyle Needs

- **Story 7.1:** As a traveler with dietary restrictions, I want to input my preferences (e.g., vegan, gluten-free), so that the AI only suggests compliant dining options.
- **Story 7.2:** As a fitness enthusiast, I want to lock in a recurring 1-hour gym or workout session every morning at 7 AM, so that the AI automatically builds the rest of my daily sightseeing around my routine.
- **Story 7.3:** As a user with accessibility needs, I want to toggle a "wheelchair accessible" flag, so that the agent filters out incompatible transit routes or venues.

8.0 Advanced Canvas Control (The Edge Cases)

- **Story 8.1 (Promote to Anchor):** As a user, when the AI suggests a museum that I absolutely love, I want to click "Lock this in," converting it into a Smart Anchor so it never gets overwritten during future regenerations.
- **Story 8.2 (Multi-City Routing):** As a dynamic explorer, I want to add a mid-trip transit anchor (e.g., "Train from Paris to Lyon on Day 3"), so the AI can smoothly transition the geography of my itinerary from one city to the next.
- **Story 8.3 (The Map View):** As a visual planner, I want to toggle between the timeline view and a map view, so I can visually verify that the AI has clustered my afternoon activities in the same neighborhood.

9.0 Real-World Execution & Booking

- **Story 9.1:** As a user ready to commit, I want deep-links attached to my AI-generated flights and hotels, so I can click through to actually purchase them.

- **Story 9.2:** As a user ready to commit, I want a one click booking feature for my complete AI-generated itinerary, including all the flights, hotels & activities.
- **Story 9.3:** As an international traveler, I want the app to cache my final itinerary locally on my device, so I can view my schedule and walking directions even when I don't have cellular roaming data.
- **Story 9.4 (Live Contingency):** As a user whose Smart Anchor flight is suddenly delayed by 3 hours, I want the live concierge to send a push notification offering to automatically compress my Day 1 itinerary to absorb the lost time.

10.0 Advanced Multiplayer Dynamics

- **Story 10.1 (Permissions):** As the trip creator, I want to assign "View Only" or "Editor" roles to my group members, so that people can look at the plan without accidentally dragging and messing up the timeline.
- **Story 10.2 (Splitting Up):** As a group traveler, I want to create a "Split Event" (e.g., Person A goes to the museum, Person B goes to the cafe), so that the system can handle concurrent paths for different people on the same trip.
